

Crest Infotech

For simple yet powerful mobile and web solutions

Company Overview

Crest Infotech, based in Mumbai, India is an Information Technology company established by Sachin Prabhu. Team Crest is a group of like-minded, expert professionals who have proved their mettle in the field of technical solutions. With an impressive clientele spread across the globe, Crest Infotech has been providing IT solutions involving selection, installation, and maintenance of complete IT Infrastructure.

Simplicity and mutual trust is the foundation of this organization. Crest Infotech delivers round the clock, start to end support to the clients from varied verticals like real estate, Financial Services, Realty Industries, Pharma & Healthcare, Government – Managed Services, Data Centers and BPO, Education, Hospitality, etc. Providing the perfect combo of technicality and creativity, Crest ensures the availability of quality services and resources at an affordable price.

The strategic business alliances with leading IT Hardware and Networking Solutions leaders make this easy for Crest.

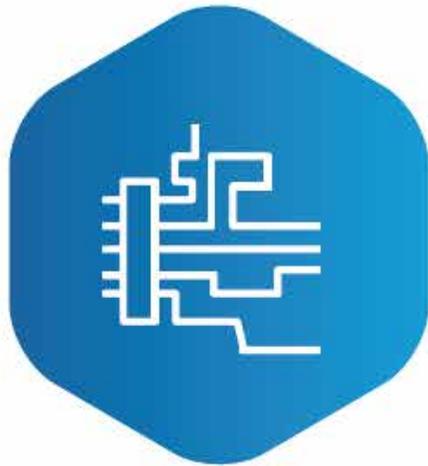

Mission and Vision

Team Crest is passionate about technology, and this strives them to accomplish more adding to their already rich portfolio. The mission is to provide technological solutions that will simplify life and enhance the quality of work. Keeping it simple with no frills, Crest Infotech has succeeded in producing simple yet powerful solutions at affordable prices and aims to do so in the future as well.

The team actively opines "We do not believe in putting forth half-baked solutions, but determined to deliver end to end support to the brands who place their trust in us. "

Services Provided

The team at Crest Infotech has partnered with several world-renowned brands to create technology solutions which have not only transformed their operations but have also increased its efficiency. A broad classification of the vast array of services provided would be as follows :

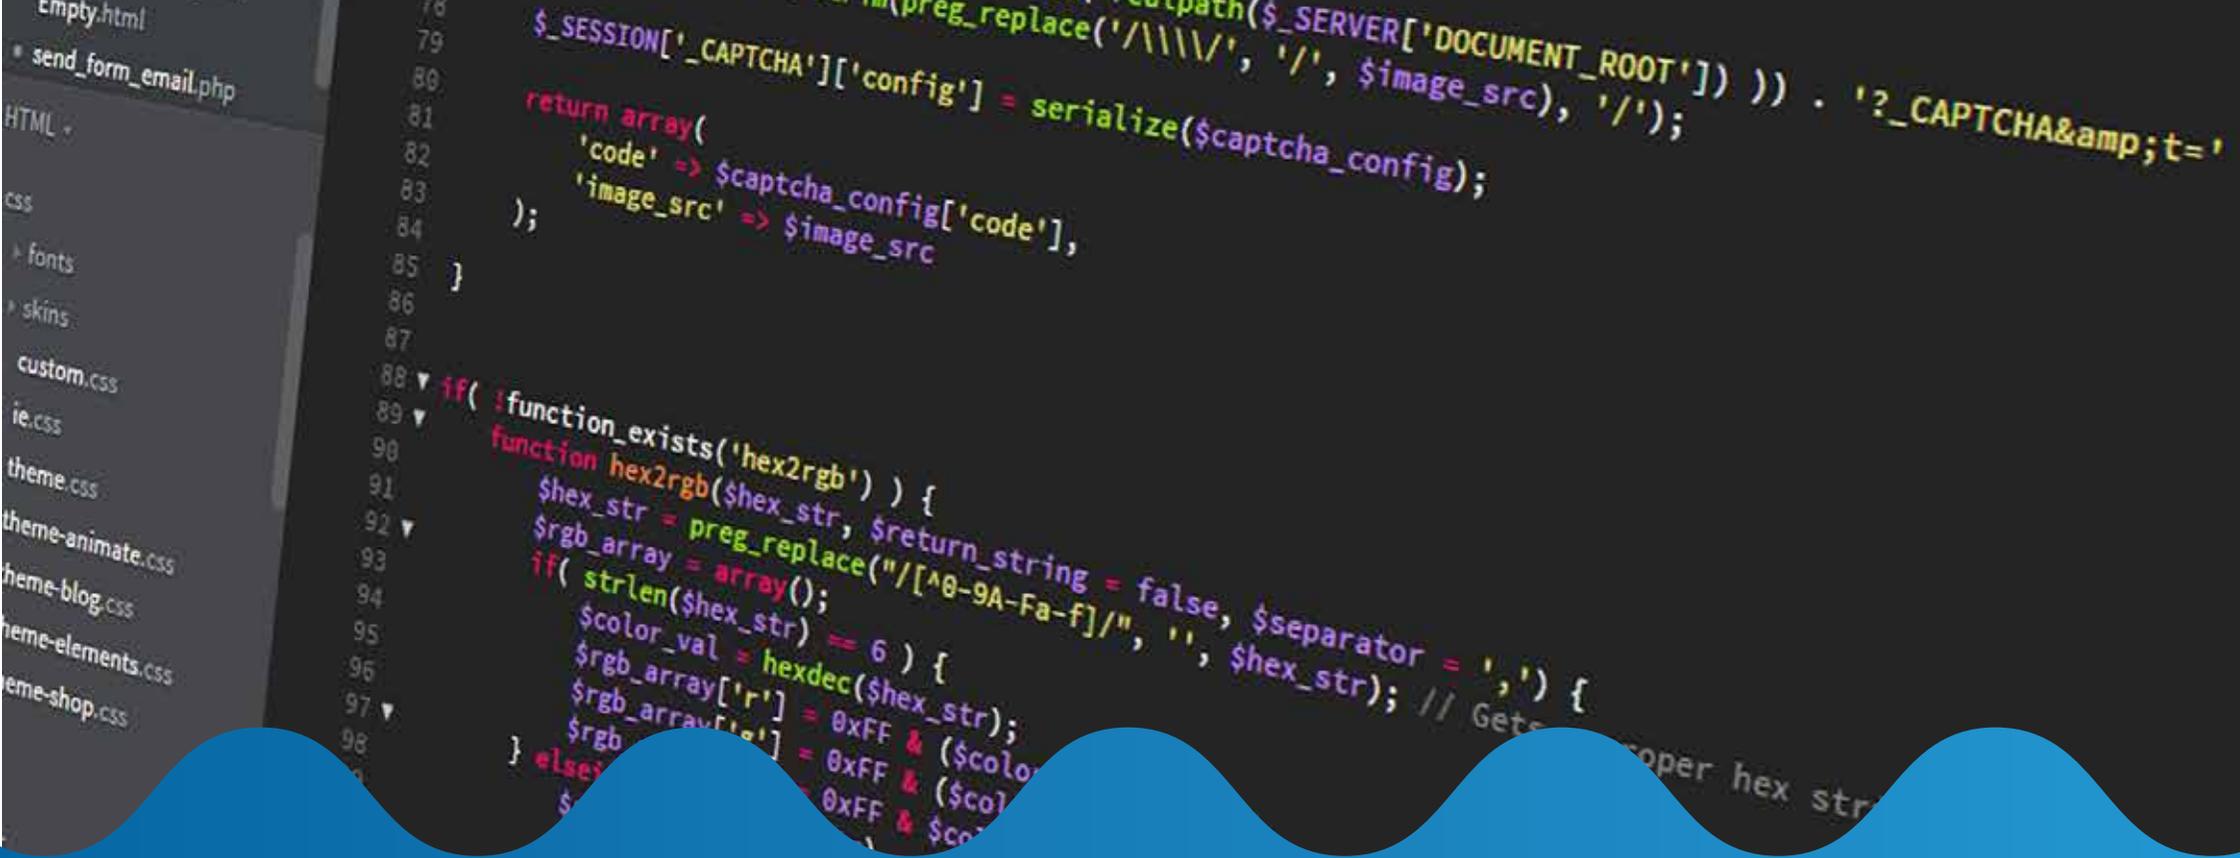

Services and IT Infra

Enterprise IT Solutions

Web and Mobile apps

Services and IT Infra

Information Technology gets revolutionized with every passing moment. Advancements in this sector have changed the world in several ways and today data from one part of the world is available in the other at the click of a button or swipe of a finger to sound smart. The choice of a right partner can help brands organize their data ineffectively in a more efficient manner. We do not believe in "one size fits all" solutions but prefer creating tailormade solutions that fit the needs of business.

Enterprise IT Solutions

We offer Enterprise It Solutions in the most cost effective manner, which will help to build better Technology Infrastructure for Enterprises as well as SMEs. The efforts by our skilled & certified professionals are constantly aimed at making your IT processes simpler.

We provide you complete IT Solutions from Virtualization & Cloud domain which includes Servers, Desktop, Application, Network Virtualization, Virtualization Management and Virtualization, Security to Storage Consolidation, Backup & Disaster Recovery and Information Security with Next Generation Firewall, IPS & SSL VPN

Web and Mobile Apps

Web and mobile apps are an inevitable part of every business today. They have transitioned from being business assets to operational tools. The dual purpose of user interfaces and technical intelligence is fulfilled through these apps.

The perfect mix of technical expertise, creativity, and user-friendliness is brought together by the team. Apps suitability according to each device is technically worked on for better results.

Every app needs to be adapted to the platform on which it gets hosted.

The intricate details which affect usability such as UI/UX is taken care of by the team.

The experience of having worked for brands from varied verticals boosts the credibility and helps in proactively identifying and addressing the issues well in advance.

We have worked on apps to suit the needs of Iphone, ipad and all other android devices.

A website today does not limit itself to being a mere online presence of a brand. It is a revenue-generating and brand building tool with a clear plan of ROI. Every penny invested in the online market can be easily accounted for today.

The audience of a business is carefully targeted according to their demography and other features. The flow of such targeted audience into a user-friendly, well optimised and responsive websites helps in the elimination of a physical store and opens up the boundaries to be placed in a world market. Hence, a website needs to be carefully constructed not just in terms of design but technical factors as well. We, at Crest Info-tech pride in creating such websites.

Our expertise over the years has helped in accomplishing this herculean task with utmost ease.

The procedure

The way we work can be split into :

Assessment of the client's needs

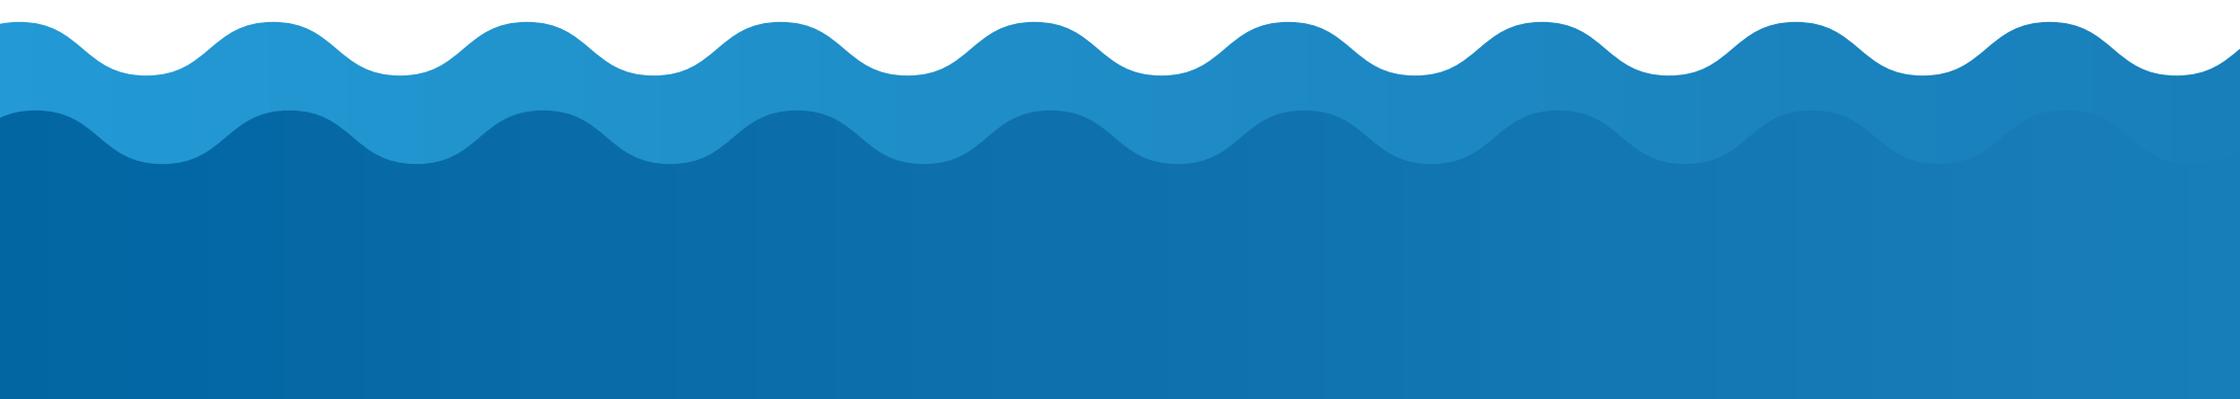

Team Crest comprises of experts who have excelled in the art of listening. We believe the clients to be custodians of their business, who understand its DNA. Research plays a pivotal role in the implementation of our projects. Significant groundwork helps us in understanding more about the business and provide well suited and well-fitted solutions. Assessing the exact needs of a client is the first step of every project. This assessment helps us in addressing the needs of the business and also in suggesting solutions with maximum ROI

Procurement of the essentials

Understanding of client needs paves the way for the next step of solution designing. The prerequisite of developing a solution is procurement of essentials. Strongly rooted in the theory of “waste not, want not” we ensure the procurement of the most essentials thus guaranteeing optimal utilization of available resources

Supply and Installation

Implementation of services is done according to predefined standards and certifications. Care is taken to ensure minimum downtime during these installations. Checking and monitoring follows installation for delivering quality

Maintenance

Crest believes in round the clock , constant support to clients post delivery of the project. Maintenance of the installations , minimising technical glitches and maximising performance remains our motto

The Edge:

There are several players providing these services in the market and the factors mentioned below sets us apart from the rest giving us the much required edge

- + Experienced professionals with technological expertise who continue to update themselves with the latest market trends
- + Uncompromised quality
- + Timely delivery
- + Constant support throughout the project
- + Affordable pricing
- + Rare combination of technical creativity and expertise
- + Primary prominence to client contentment

The Team

Sachin Prabhu
